

## 1.1 Mode of teaching

At Government College Sanjauli, the teaching methodology is dynamic and responsive to the evolving needs of students, ensuring a holistic learning experience. One of the unique features of the academic environment here is the screening of documentaries that are carefully selected and integrated into the curriculum. These screenings are aligned with the syllabus and offer students an in-depth visual understanding of various subjects, from historical events to scientific phenomena. By incorporating documentaries, the college allows students to witness real-world applications and case studies, deepening their understanding of theoretical concepts through engaging and thought-provoking content.

The traditional lecture method remains a foundational aspect of teaching, providing a structured approach to imparting key concepts and information. However, recognizing the importance of diverse learning styles, the college complements this with technology-based teaching. With the extensive use of ICT tools, faculty members employ digital platforms, multimedia presentations, and interactive content to make the learning process more engaging and student-centered.

Moreover, the college has embraced blended learning strategies, combining face-to-face instruction with online learning resources. This model allows students to access study material at their own pace outside the classroom, while classroom time is utilized for deeper discussions and interactive activities. In addition, the concept of the flipped classroom is increasingly being practiced. Students are introduced to course material beforehand, often through digital media, and classroom sessions are used for hands-on problem-solving and interactive engagement, encouraging critical thinking and active learning.

To further enhance the learning experience, the teaching methods are adapted to meet the varied needs of different student groups. Whether it is the foundational courses for beginners or advanced content for specialized streams, the faculty is skilled in tailoring their approaches to ensure that all students benefit. The wide use of Information and Communication Technology (ICT) tools plays a crucial role in this, with faculty members integrating various digital tools, educational software, and online platforms to deliver content that is interactive, accessible, and up-to-date with global academic standards.

Smart classrooms, with their state-of-the-art equipment, are a highlight of the college's infrastructure. These classrooms are equipped with projectors, digital boards, and audiovisual tools that facilitate a modern, immersive learning environment. The use of smart technologies enables both faculty and students to engage with content in innovative ways, transforming traditional teaching into a more interactive and collaborative process.

**Through a comprehensive blend of documentary screenings, traditional lectures, technology-based tools, blended learning, and the flipped classroom model, Government College Sanjauli ensures that its students receive a well-rounded education. This forward-thinking approach equips students not only with academic knowledge but also with the critical skills needed to thrive in the modern world.**
