

3. Water conservation

Water conservation facilities available in the Institution:

Rain Water Harvesting: The campus has a rain harvesting tank. Throughout the rainy season, water from the roof tops falls into the tank through rain-water outlets. The tank, however, is currently out of action because of the ongoing demolition of the old Principal's residence and proposed construction of the new Arts Block.

Before construction work:

PVC pipes used to reach the rain water to the tank from various buildings' roof

PVC pipes used to reach the rain water to the tank from various buildings' roof

Rain Water Harvesting Tank

Dysfunctional due to demolition of the Principal's residence

WATERHARVESTING WILL RESUME AS SOON AS THE PILLARS OF THE NEW ARTS BLOCK ARE IN PLACE
